Deep Clean & Sanitisation Services

How is it done?

Sanitisation

Our sanitisation process includes a full V1 Virucidal sanitising to all surfaces, focusing on touch points including equipment, furniture, doors, handles, switches, buttons, floors, kitchens and toilets etc.

We follow our sanitisation process with a full fogging process using a powerful germicide and sanitiser to keep your room sterilised for up to 7 days. The sprayed product produces a mist to ensure appropriate dwell time and as it is fogged, it fills the air, envelopes furnishings and clings to surfaces resulting in a thorough application which does not need to be wiped off or hand cleaned.

What we cover

Coronavirus Sanitisation	Disinfection of Equipment
Virucidal Sanitising	Disinfection of Hard Surfaces
Full Fogging X-Mist	Government Approved Germicides
Germicide & Sanitiser	Health & Safety Compliant
